Tejit's Non Profit Tools

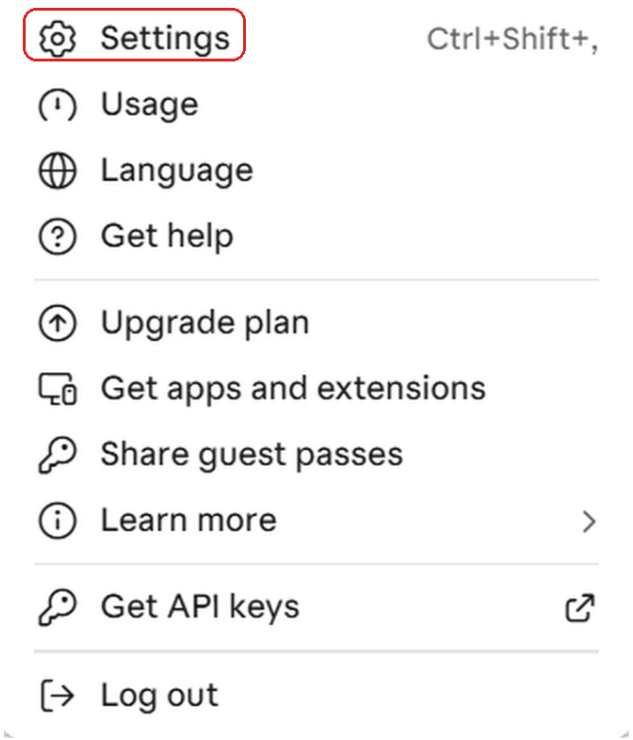

A quick guide for your team

What this is

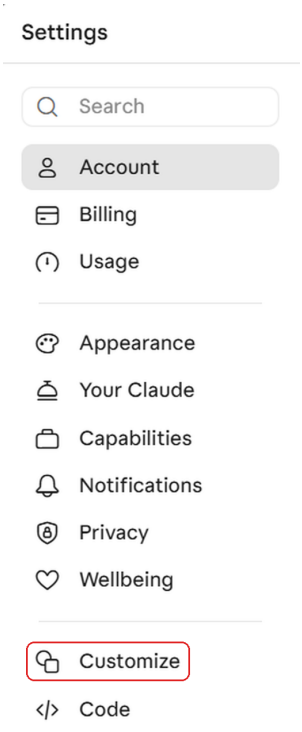

Free, open-source helpers for AI assistants that take repetitive work off a nonprofit team's plate. The first tool is **Partner Event Finder**. It finds your partners' fundraising events and adds them to a shared Google Calendar. Each step is explained in plain words.

Add it in Claude

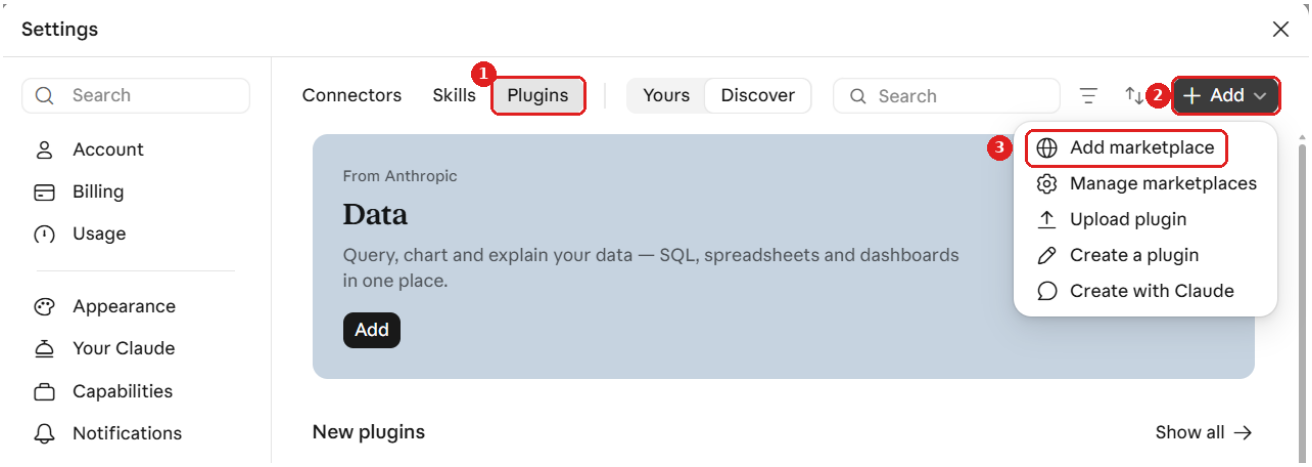

1. Click your name, then click Settings.

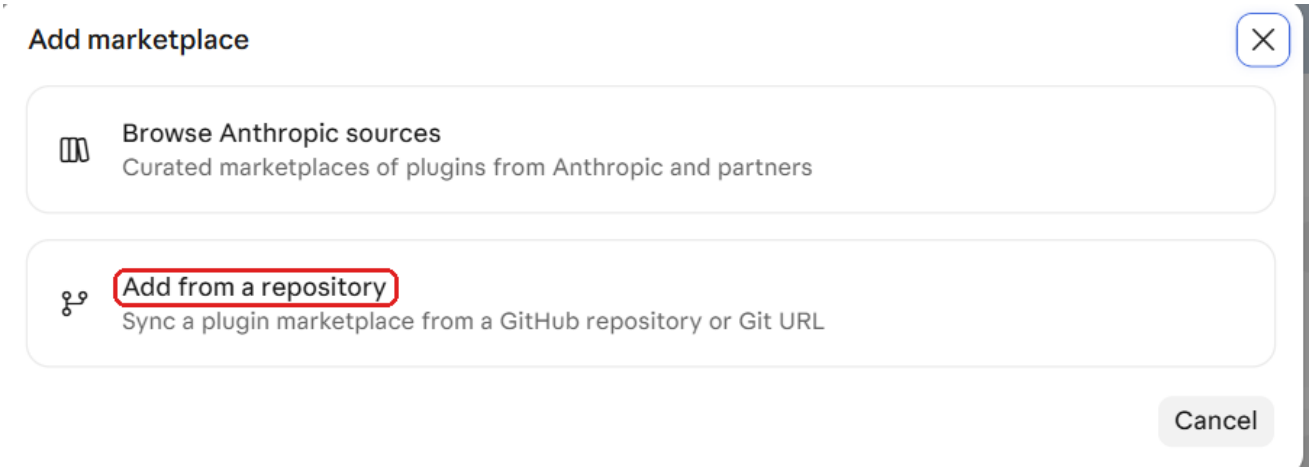

2. Click Customize.

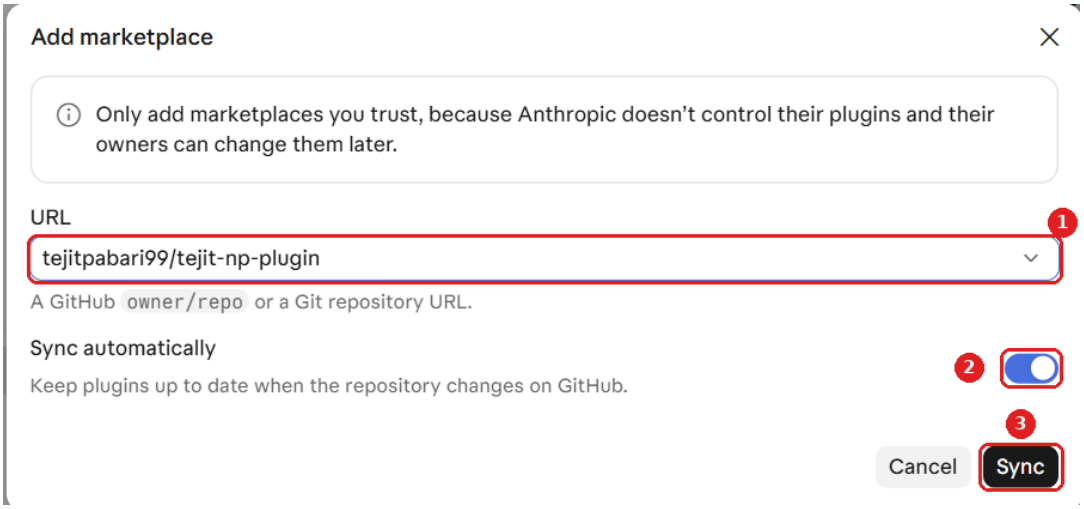

3. Click Plugins, then Add, then Add marketplace.

4. Click Add from a repository.

5. Type tejitpabari99/tejit-np-plugin, keep Sync automatically on, then click Sync.

6. If you see an Install button for Tejit's Non Profit Tools, click it.

7. Start a new chat and say "Tejit's non profit tools".

Please add it this way, rather than copying files, so you get updates and fixes automatically.

Using a different AI tool? See https://github.com/tejitpabari99/tejit-np-plugin/blob/main/docs/install.md.

Star it on GitHub

Please star the project at https://github.com/tejitpabari99/tejit-np-plugin. It helps you:

• Keep track of it and see what is changing.

• Report problems and share ideas (by filing issues).

New versions arrive on their own once **Sync automatically** is on, and the GitHub page shows what changed. It is all open source, so all the code can be seen any time. You need a free GitHub account to star it. Your AI assistant can help you create one.

Report a problem or share an idea

Once the plugin is added, just say **"share feedback"** (or **"report a problem"**) in a chat. Your assistant asks a few questions, shows you the report, then files it after your yes. Reports are public, so private details are never included. You do not need a GitHub account; it can go by email instead.
